

Internship Software Development (m/w)

COSEDA Technologies is a leading provider of system-level software solutions for complex electronic hardware and software products. Are you passionate about working side by side with experienced engineers and developers?

Your Opportunities

- Support in the development of our Eclipse-based software COSIDE®
 - User interface design and implementation
 - Backend implementation (business logic, code generation, model transformations, etc.)
 - Test driven development
- Design and implementation of prototypes to evaluate new technologies
- Possibility to work on open source projects (e.g. Eclipse CDT)
- Possibility of development in different JVM languages (Java, Scala, Xtend, Kotlin)
- We certainly have many more ideas. However, we are also open for your input.

Your Profile

- Completed 3rd semester of computer science, business informatics or a similarly relevant discipline
- Well-founded knowledge of object-oriented software development

We offer

- A Startup environment with the benefits of global software company
- Continuous learning and coaching with excellent development and career opportunities
- A varied activity with state-of-the-art tools and methods in an exciting field of activity
- A lot of new knowledge in a short time and plenty of room for your creativity

Interested? Then we look forward to receiving your application including your proof of mandatory internship to thomas.hartung@coseda-tech.com
